

Adding and Subtracting Fractions

Add or subtract these fractions. You do not need to simplify your answers.

$$1) \frac{1}{4} + \frac{2}{4} = \qquad 11) \frac{5}{6} - \frac{1}{6} =$$

$$2) \frac{2}{6} + \frac{3}{6} = \qquad 12) \frac{7}{9} - \frac{2}{9} =$$

$$3) \frac{1}{9} + \frac{7}{9} = \qquad 13) \frac{3}{4} - \frac{2}{4} =$$

$$4) \frac{5}{11} + \frac{3}{11} = \qquad 14) \frac{4}{5} - \frac{2}{5} =$$

$$5) \frac{5}{12} + \frac{7}{12} = \qquad 15) \frac{6}{7} - \frac{2}{7} =$$

$$6) \frac{1}{5} + \frac{2}{5} = \qquad 16) \frac{7}{8} - \frac{4}{8} =$$

$$7) \frac{2}{7} + \frac{3}{7} = \qquad 17) \frac{6}{10} - \frac{4}{10} =$$

$$8) \frac{3}{8} + \frac{2}{8} = \qquad 18) \frac{8}{11} - \frac{5}{11} =$$

$$9) \frac{3}{10} + \frac{4}{10} = \qquad 19) \frac{7}{12} - \frac{2}{12} =$$

$$10) \frac{2}{15} + \frac{7}{15} = \qquad 20) \frac{14}{15} - \frac{9}{15} =$$

I affirm that this test was done under test conditions. Parent signature: _____

Adding and Subtracting Fractions

Do not give this to the student.

$$1) \frac{1}{4} + \frac{2}{4} = \frac{3}{4}$$

$$11) \frac{5}{6} - \frac{1}{6} = \frac{4}{6}$$

$$2) \frac{2}{6} + \frac{3}{6} = \frac{5}{6}$$

$$12) \frac{7}{9} - \frac{2}{9} = \frac{5}{9}$$

$$3) \frac{1}{9} + \frac{7}{9} = \frac{8}{9}$$

$$13) \frac{3}{4} - \frac{2}{4} = \frac{1}{4}$$

$$4) \frac{5}{11} + \frac{3}{11} = \frac{8}{11}$$

$$14) \frac{4}{5} - \frac{2}{5} = \frac{2}{5}$$

$$5) \frac{5}{12} + \frac{7}{12} = \frac{12}{12}$$

$$15) \frac{6}{7} - \frac{2}{7} = \frac{4}{7}$$

$$6) \frac{1}{5} + \frac{2}{5} = \frac{3}{5}$$

$$16) \frac{7}{8} - \frac{4}{8} = \frac{3}{8}$$

$$7) \frac{2}{7} + \frac{3}{7} = \frac{5}{7}$$

$$17) \frac{6}{10} - \frac{4}{10} = \frac{2}{10}$$

$$8) \frac{3}{8} + \frac{2}{8} = \frac{5}{8}$$

$$18) \frac{8}{11} - \frac{5}{11} = \frac{3}{11}$$

$$9) \frac{3}{10} + \frac{4}{10} = \frac{7}{10}$$

$$19) \frac{7}{12} - \frac{2}{12} = \frac{5}{12}$$

$$10) \frac{2}{15} + \frac{7}{15} = \frac{9}{15}$$

$$20) \frac{14}{15} - \frac{9}{15} = \frac{5}{15}$$
