

Birds Feed Their Families

7/11/18

Father and mother birds must build homes for their young families. In spring they get busy building nests. They build nests for the young baby birds. Until the baby birds grow long feathers from their skin, they stay in their nests. Until their wings grow strong enough to fly, the baby birds must stay close to their nests.

The father and mother birds stay very busy feeding their young families. The young birds eat and eat. They eat bugs and worms. The father and mother birds must find enough bugs and worms to feed the young birds. The big birds stay very busy. The baby birds grow quickly, and then leave the nest.

Thank You, God, that You help the birds build nests for their young. Thank You, God, that You help the big birds find enough bugs and worms to feed their young families.

Put the right word on the blank.

Birds build homes for their young families.

domes
homes

Put the right word on the blank.

Baby birds grow long feathers from their skin.

The skin of baby birds must grow strong.

Father and mother birds feed their young families.

The big birds find bugs and worms.

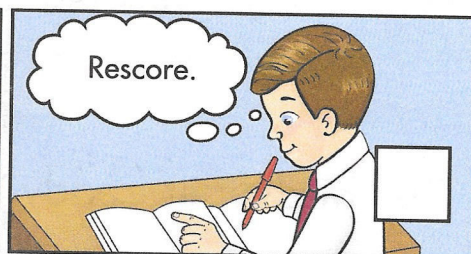

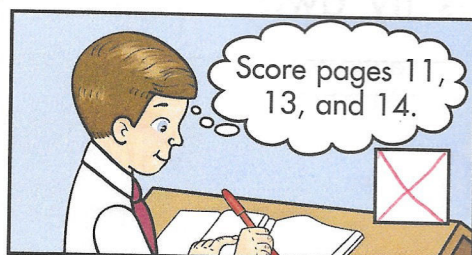

The big birds stay very close.

Good job in finding the information from the text! Remember to take your time so your writing is neat and easy to read.

Read and fill in the blanks.

G o d hath . . . given us the spirit . . .
of I o v e.

II Timothy 1:7

8/3/19

Where do kookaburras live?

^{aburras}
^{live} in the open ~~forests~~ forest,
woodlands, trees, ^{and} zoos.

What do they eat?

^{as eat}
snakes, worms, lizards, rodents and
sometimes a small bird, ^{but} mainly
insects.

are they warm blooded and
do they lay eggs?

^{gs can lay}
five eggs. ~~warm~~ blooded, They
nest in hollows ~~and~~ ⁱⁿ trees
and ^{on} termite mounds.

Kookaburras are warm blooded

Good researching Izzy! Make sure you use complete sentences and neat handwriting.

Excellent drawing, remember to keep the wing the same size as the body and use colour in your final project.

Kookaburras eat
snakes, worms, lizards,
insects, and sometimes
small birds, but
mainly insects.

Kookaburra

Kookaburras lay
to five eggs. They
nest in tree
hollows, and on
termite mounds.

Kookaburras are warm

kookabaras live
the open for
woodlands, trees,

Excellent work Izzy!

You have done an amazing job
your first project!

Be careful with your spelling and
make sure you write in the correct
lines.

You did beautiful handwriting and
have improved on your drawing.
Beautiful work!
