of Basic Education

Name _____

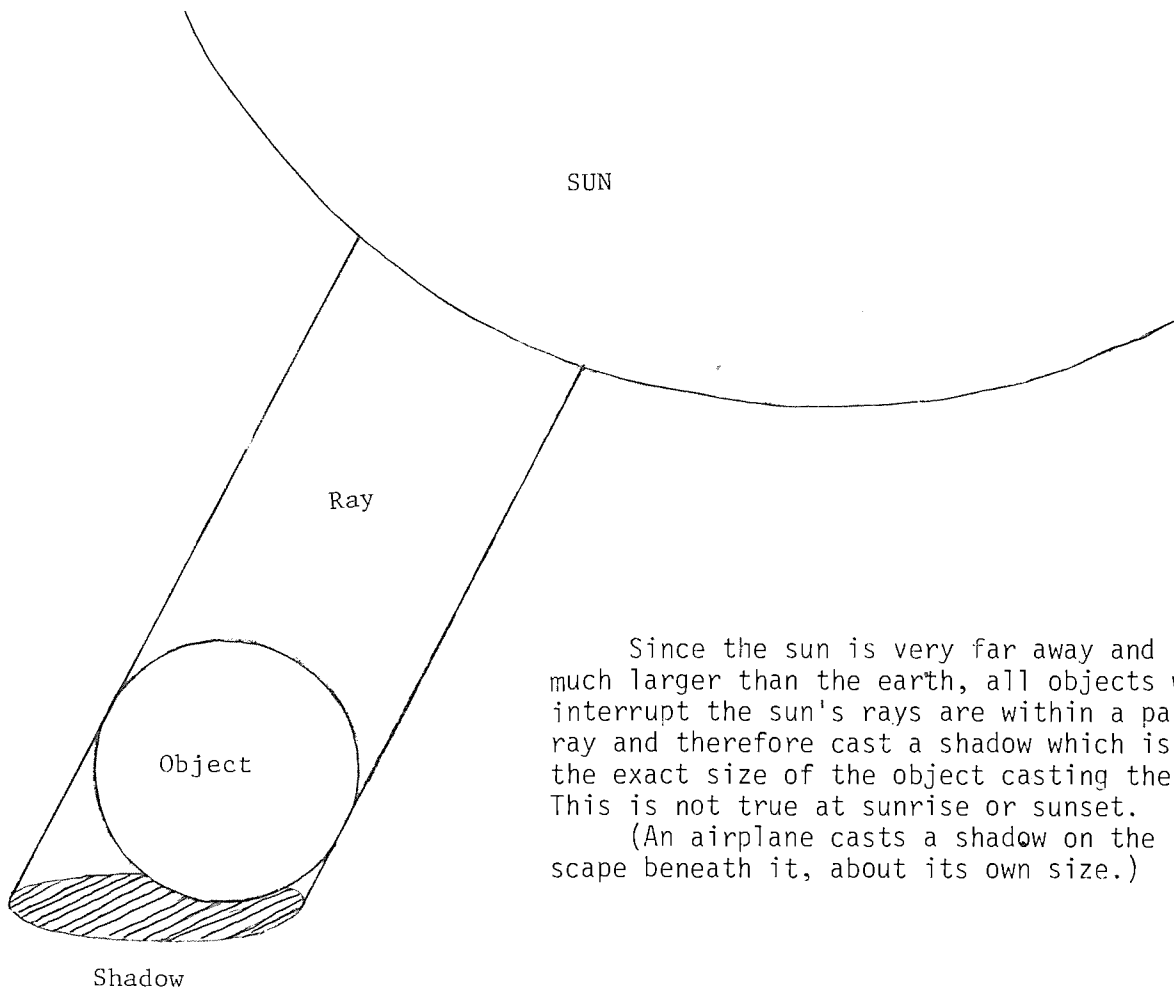

STUDENT'S GOAL

- Target test date _____
- Pages in Self-Pac _____
- School days until test _____
- Pages per day _____
- Date Self-Pac completed _____

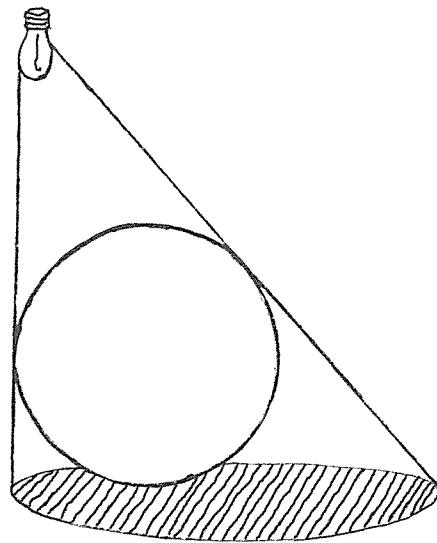

Learn to recognize these terms, core, highlight, reflected light, and shadow. Also, learn to use them to make an object seem round. Note also that there is a slight shading on the edge of a round object where it curves away from the viewer on the light side. Be sure to use this slight shading as well.

Since the sun is very far away and is much larger than the earth, all objects which interrupt the sun's rays are within a parallel ray and therefore cast a shadow which is nearly the exact size of the object casting the shadow. This is not true at sunrise or sunset.
 (An airplane casts a shadow on the landscape beneath it, about its own size.)

When an object is lighted by an electric light or other light source less than its own size, the shadow will be larger than the object itself.

Be careful when drawing shadows to consider the light source and the contour of the surface on which the shadow lies. The shadow will follow the contour of the surface.

Aerial Perspective

When a person looks off into the distance, the mountains or hills far away look much lighter and less detailed than the ones in the foreground. The atmosphere between the viewer and the object makes this difference in appearance.

Furniture

Furniture is generally built on the general shape of a box or part of a box. Upholstery has the same principle of shading as the ball or tube, that is, highlight, core, reflected light, shadow.

Study the picture of the chair done in pencil.

Assignment 6. Either draw a chair in your home, your school, or draw a chair in a picture. If you are using a real piece of furniture rather than a picture, be sure to put a strong light on it so that you can see the lights and shadows.

As your supervisor to examine your work and initial your PACE here _____.
